Executive Summary

Supported evidence is listed verbatim by source; no undocumented conclusion has been added.

1448 (

- [754 (Process Safety Performance Indi-] Formal discussions could be in the form of brief periodical sessions while informal discussions could be over a cup of tea with personnel working in the area. Study of Documents: In addition to the documents which are already studied before inspection of the facilities, other documents, such as Operating Instructions, Standing Orders, Log Books, Log sheets, Accident Records, Minutes of Safety Committee Meetings may also be studied as required. 282 Preparation of Audit Reports: The work of the Internal Safety Audit item should be presented in the form of a Safety Audit Report for each group which should contain observations and recommendations and also in brief the modalities adopted in conducting audit and the names of the audit team members. Before finalizing the report, the Safety Audit Team can give a presentation as feedback to the Operating or Management personnel of the Area or Installation. Additions or deletions could be made in the draft report based on the discussions and comments received during the presentation and such approach is always constructive and does not undermine the technical competence of the audit team. Follow Up of Audit Reports: Generally, the Internal Safety Audit Reports are submitted to the concerned authority who appoints the audit team for undertaking needful follow up actions. Only the appointing authority should exercise judgement in rejecting any of the recommendations. The appointing authority shall be of senior management level (General Manager and above). The crux of the safety audits lies in removing the weakness identified during the audit. Sometimes audit reports identify only the problem or weakness, but not the solution. In such cases, it would be necessary to undertake a detailed study of the specific area and to identify the rectification measures. Wherever the necessary in house expertise is not available for detailed studies, help of consultants or professional bodies should be sought for. Implementation of Recommendations: The final and most important phase is the implementation of recommendations. A senior person should be nominated for coordinating implementation of all accepted recommendation under a time bound program. Senior management should review the progress of implementation of recommendations periodically through Management Safety Committee meetings and o ther review meetings. Schedule 9 [see regulation 6] Road Safety: Vehicles are always a probable source of ignition. At the same time unsafe driving is a potential hazard as the vehicle may collide with others, may hit someone working or may overturn. All these may lead to events that might turn out to be catastrophic. Hence movement of vehicles inside Refineries and Gas processing plants (hereinafter referred to as or mobile equipment such as Maintenance vehicles, Cranes and Hydra are required for carrying out operation, maintenance and project activities, are required to be allowed to ply inside the hazardous area.
