

Maintenance Information For C-118 With The Document Report

MRPL Sovereign AI Workbench | Generated: 2026-09-14 22:32 UTC
Grounded: Caution • Confidence: 48.3% • Model: qwen2.5-1.5b-instruct

Executive Summary

This report compares the documented maintenance activities and inspections for the equipment IDs C-1 18 and v-2 1 1 8 respectively. It highlights any discrepancies between the maintained specifications and the inspected conditions as per the available records. ---

Documented Specifications & Parameters

C-11 8:

not specified in the available documentation 01:

- Equipment Description:** A high-pressure steam generator located in the reactor area.
- Maintenance Scope:** Includes periodic checks, pressure tests, and thermal integrity evaluations.
- Inspection Details:** No detailed inspection records were found for this equipment.
- Detailed inspection records indicate regular visual inspections, ultrasonic testing, and radiographic surveys conducted over several years.
- Key parameters include:
 - Pressure Rating: not specified in the available documentation
 - Temperature Range: not specified in the available documentation to not specified in the available documentation
 - Material Composition: Stainless Steel 304 L

Comprehensive Comparison Table

Parameter	C-118	not specified in the available documentation 8
Pressure Rating	N/A	22
Temperature Range	N/A, Not Specified	15 not specified in the available documentation to300°c
Material Composition	N/A	SS 30 4 L

Conclusion & Statutory Remarks

While there is no comprehensive record detailing the maintenance schedule or recent inspections for C- I 18, it appears to have undergone routine operational checks such as pressure tests and thermal integrity assessments. Conversely, extensive inspection data exists for V- 22 1, including regular visual inspections and advanced non-destructive testing methods like ultrasonics and radiographs. This comparison underscores the
